Aerial Lift Platforms

Requirements apply when using an Aerial Lift Platform.

Standards for using an Aerial Lift Platform:

- Operator must be certified/trained to operate the equipment and understand the capabilities and limitations.
- Complete an Equipment Pre-use Inspection.
- Complete a Worksite Inspection: verify overhead hazards, ground conditions, traffic routes, and emergency response plan.
- Workers **must** wear a fall arrest harness and attach the lanyard to the engineered anchor point on the platform.
- Stand only on the floor — don't sit, stand, or climb on the guardrail.
- Never use other equipment, such as a ladder, to gain additional height.
